

Accelerate Summit releases with RightClick TMS

Remain agile in an ever-shifting financial market and increase the quality of your Summit releases by introducing test automation into your release process. Fully integrated with Summit, you can start automating your tests from Day 1.

- ✓ Intuitive solution
- ✓ Reliable & secure
- ✓ No technical skills required
- ✓ Fully integrated with Summit
- ✓ Easy to expand to any application

We've built a scalable **no-code solution** that empowers non-technical teams to accelerate Summit testing & increase the quality of the release cycles at a reduced maintenance cost. **All without the need to code.**

01

Quicker and easier than ever to automate

Automating your Summit testing processes is now a breeze. Powerful AI capabilities allow users to easily create reusable automated tests in minutes.

02

Non-technical teams can easily work with TMS

Our no-code testing solution makes it simple to automate Summit tests, even if your team lacks a technical background. No scripting or technical skills required.

03

Easy to manage & scale up your test portfolio

Leverage TMS to easily maintain your test cases or create new ones as your needs evolve. Integration with ALM and Jira. Embedded intelligent comparison tool.

Proven to reduce testing efforts by up to **70%**

Fast cost savings

Higher predictability of test cycles

Accelerate time to value

Reduce risks & human errors

Improve quality & compliance

Drive business agility

Reimagine your Summit testing process.

UI Driven Testing

Validate end-to-end business workflows by automating user interaction with the system and setting pre-defined success criteria.

Backend Testing

Create API tests, scripts and other executables and integrate them in your tests to validate system functionality.

Batch Testing

Execute batch jobs and compare the results with powerful automated comparison capabilities that make it easy for you to analyze true differences.

Regression Testing

Execute tests and compare results between two versions of your system. Fully integrated with Summit.

Interface Testing

Automate interaction between multiple systems and validate results from your upstream and downstream systems.

SIT/UAT Testing

Combine automated GUI tests, API tests, reports, utilities, query databases, and scripts to cover a full workflow across multiple systems.

We speak Summit

With decades of combined Summit experience within the team, we have built an excellent track record in helping clients with their Summit-related challenges - implementations, upgrades, and customized projects for businesses of any size.
